最小内核版本

编译器版本

大致就这样,接下来保存.config. 输入ct-ng build开始构建

```
CONF menuconfig
            * End of the configuration.
* Execute 'ct-ng build' to start the build or try 'ct-ng help'.
*** Execute "ct-mg build" to start the build or try 'ct-mg help'.

***Mabunut:-/Mustc/cross-mg ct-mg build

```

可以看到构建开始了, 但是进度太慢, 因为要先下载各种组件包, 然后进行编译, 而我啥也没有提前准备

```
M写代码 | ① 复制
```

所以需要自行下载组件包,放到cross-ng/src目录下,下边是全放好的状态,也可以下载其中比较大的包,其余的任由它自动下载

接下来再运行ct-ng build就很快了
